IN THE CLAIMS

Please cancel claims 1-16 without prejudice and add claims 17-34 as follows:

- 1.-16. (Canceled)
- 17. (New) A tissue graft composition comprising gelled liver basement membrane tissue of a warm-blooded vertebrate, added nutrients, and added cells wherein the gelled liver basement membrane tissue is seeded with the cells prior to implantation of the graft composition into the warm-blooded vertebrate.
- 18. (New) The tissue graft composition of claim 17 wherein the gelled liver basement membrane is prepared by adjusting the pH of a solution of fluidized liver basement membrane tissue and added nutrients to about 6.0 to about 7.4.
- 19. (New) The tissue graft composition of claim 17 wherein the composition is useful as a non-immunogenic tissue graft composition capable of inducing endogenous tissue growth when implanted into the warm-blooded vertebrate.
- 20. (New) A composition for supporting the growth of a cell population in vitro, the composition comprising gelled liver basement membrane tissue of a warm-blooded vertebrate and added nutrients to support the growth of the cell population.
- 21. (New) The composition of claim 20 wherein the gelled liver basement membrane is prepared by adjusting the pH of a solution of fluidized liver basement membrane tissue and added nutrients to about 6.0 to about 7.4.
- 22. (New) A composition for supporting the growth of a cell population, the composition comprising culture-ware coated with a matrix comprising gelled liver basement membrane tissue and added nutrients.

- 23. (New) The composition of claim 22 wherein the gelled liver basement membrane tissue is gelled by adjusting the pH of a solution of fluidized liver basement membrane tissue and added nutrients to about 6.0 to about 7.4.
- 24. (New) A method for inducing the formation of endogenous tissue at a site in need of endogenous tissue growth in a warm-blooded vertebrate, the method comprising the step of implanting a graft composition comprising gelled liver basement membrane tissue of a warm-blooded vertebrate at the site in need of endogenous tissue growth in an amount effective to induce endogenous tissue growth.
- 25. (New) The method of claim 24 wherein the graft composition is implanted surgically.
- 26. (New) The method of claim 24 wherein the gelled liver basement membrane tissue is seeded with exogenous cells prior to implantation of the graft composition into the warm-blooded vertebrate.
- 27. (New) The method of claim 24 further comprising the steps of preparing a solution of fluidized liver basement membrane tissue and added nutrients and gelling the solution by adjusting the pH of the solution to about 6.0 to about 7.4.
- 28. (New) A method for preparing a tissue graft composition from warm-blooded vertebrate liver tissue having both cellular and extracellular components, the method comprising the steps of:

treating the liver tissue with a cell dissociation solution for a period of time sufficient to release the cellular components of the liver tissue from the extracellular components without substantial disruption of the extracellular components;

separating the cellular components from the extracellular components;

digesting the extracellular components and adding nutrients to form a solution of fluidized liver basement membrane tissue; and

gelling the solution of fluidized liver basement membrane tissue to form a solid or a semi-solid matrix.

- 29. (New) The method of claim 28 wherein the cell dissociation solution comprises a chaotropic agent.
- 30. (New) The method of claim 28 wherein the cell dissociation solution comprises a protease.
- 31. (New) The method of claim 28 wherein the cell dissociation solution comprises EDTA and trypsin.
- 32. (New) The method of claim 28 wherein the liver tissue is sliced into sheets or strips of liver tissue before the liver tissue is treated with the dissociation solution.
- 33. (New) The method of claim 32 where the liver tissue is sliced into sheets or strips having a thickness of up to about 500μ.
- 34. (New) The method of claim 28 wherein the fluidized solution is gelled by adjusting the pH of the solution to about 6.0 to about 7.4.
